

Where to use	Specifically designed for attachment to the inside lip of rain gutters
Target Bird	Gulls, Pigeon or larger
Bird Pressure	Light–Medium (see pg. 6 for details)
Material	Stainless steel and Polycarbonate
Installation	Stainless steel clips slide over lip of rain gutter.
Installation Level	Easy

How it Works

Thin stainless steel spikes protrude upwards from a plastic base, making it difficult for birds to gain a foothold. Gutter-Point's specially designed clips make it easy to install and the spike configuration protects not only the edge of the gutter, but the inside as well.

Easy to Install

Slip the stainless steel clips provided over the upper lip of the gutter and move on to the next section.

Removable

Many gutters require periodic cleaning, and Gutter-Point can be easily removed, then clipped back on when the cleaning is done.

Hard To See

The thin, but rigid, stainless steel rods are almost invisible from a mere 20 foot distance.

Humane

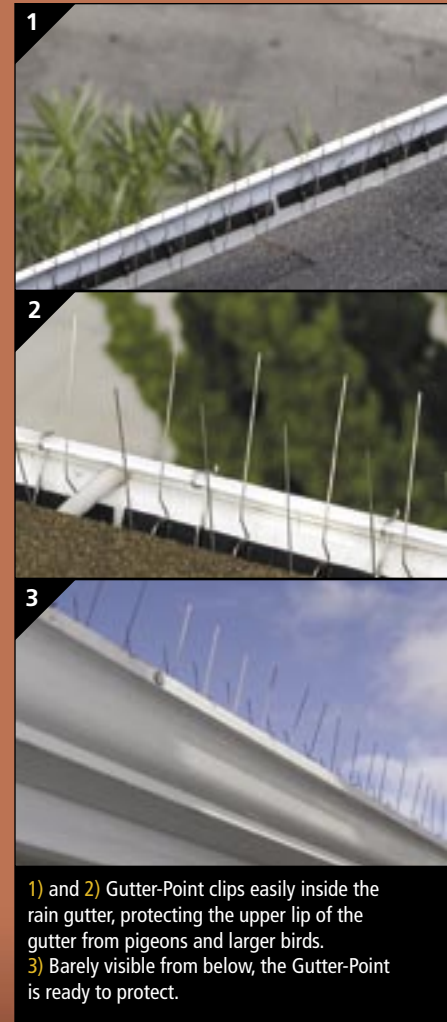

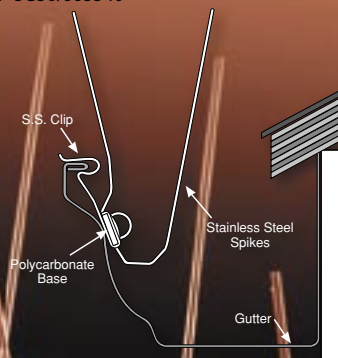

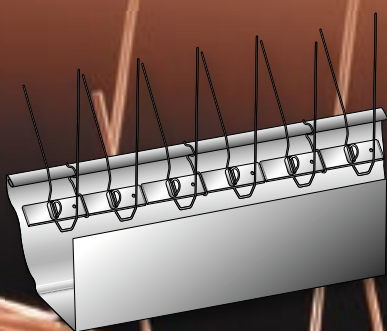

Gutter-Point's rods are not sharpened, and therefore it is extremely difficult for humans, animals or birds to become injured by them.

Gutter-Point is designed for use on standard gutters only and is available in 25 and 50 foot packages. Clips for non-standard gutters are available by special order.
